

MedAgent AI Screenshots

MedAgent AI is a **GenAI-powered Disease Diagnosis Assistant** that serves as a clinical decision support system built using React, Fast API and RAG, that:

- Takes **symptoms, lab reports, vitals, history**
- Asks **follow-up questions (AI Agent)**
- Uses **medical knowledge RAG**
- Predicts **possible diseases with confidence score**
- Suggests **next steps (tests / specialist / urgency level)**.

This is how the home page looks of the application looks like (notice that there is a chatbot feature as well on the bottom-right)-

The screenshot shows the MedAgent AI Clinical Decision Support System interface. At the top, there is a blue header with the MedAgent AI logo and the text "Clinical Decision Support System". Below the header, a yellow warning box states: "This is an AI-assisted tool for clinical decision support only. It is **NOT** a substitute for professional medical advice, diagnosis, or treatment. Always consult a qualified healthcare provider." Below the warning box, a progress bar with four steps is shown: 1. Symptoms (highlighted), 2. Patient Info, 3. Vitals & Labs, and 4. Results. The main content area is titled "Symptoms & Chief Complaint" and contains several input fields: "Symptoms" (with a placeholder "Type a symptom and press Enter..."), "Common symptoms" (with a list of buttons: Fever, Headache, Cough, Fatigue, Chest pain, Shortness of breath, Nausea, Dizziness, Joint pain, Abdominal pain), "Symptom Duration" (with a placeholder "e.g., 3 days, 2 weeks, 1 month"), and "Additional Notes" (with a placeholder "Any additional information about your symptoms..."). A blue chatbot icon is visible in the bottom right corner.

In the first page, user can enter symptoms, symptoms duration and additional notes as shown:

 **Symptoms & Chief Complaint**

Symptoms *

Fatigue ×

Headache ×

Common symptoms:

Fever

Headache

Cough

Fatigue

Chest pain

Shortness of breath

Nausea

Dizziness

Joint pain

Abdominal pain

Symptom Duration

Additional Notes

Next: Patient Info →

The next page asks for patient basic details like age, height, past medical conditions, lifestyle information etc which are optional data. Giving such inputs will help the application to narrow down the disease analysis result.

 All fields on this page are optional. Providing more information helps improve diagnosis accuracy.

Age OPTIONAL

Gender OPTIONAL

Weight (kg) OPTIONAL

Height (cm) OPTIONAL

30

Female 

55

156

Medical History OPTIONAL

Type a condition and press Enter...

+

Thyroid Disorder 

Common conditions:

Hypertension

Diabetes

Asthma

Heart Disease

Thyroid Disorder

Current Medications OPTIONAL

Type a medication and press Enter...

+

Lifestyle OPTIONAL

I do walking on 5 days a week for around 4-5 km, and play one-hour sports on weekend.

 Back

Next: Vitals & Labs 

The next page is the ‘Vitals and Labs’, prompting the user to enter details like heart rate, breathing rate, upload **any lab reports that are clinically relevant** -- both current and prior. The lab reports section does support an optional **date/timeframe field** per lab entry so the AI can weigh recent vs. older results appropriately.

 Vital Signs

OPTIONAL

BP Systolic (mmHg)

122

BP Diastolic (mmHg)

80

Heart Rate (bpm)

72

Temperature (°F)

98.6

Respiratory Rate (/min)

17

SpO2 (%)

98

 Lab Reports

OPTIONAL

No lab reports? No problem — just click "Analyze with AI" to proceed with symptoms only. You can include both current and prior lab results.

TEST NAME

e.g., HbA1c

VALUE

e.g., 7.2%

WHEN

OPTIONAL

e.g., Today, 2 weeks ago

×

+ Add Lab Report

← Back

 Analyze with AI

Now, on clicking the ‘Analyze with AI’ button, the diagnosis engine runs and shows different diagnoses alongwith confidence score.

Symptoms

Patient Info

Vitals & Labs

Results

LOW URGENCY

The patient's symptoms are chronic and not severe, and there is no indication of an immediate life-threatening condition. However, it is still important to further evaluate the patient's symptoms and determine the underlying cause to provide appropriate treatment and prevent potential complications.

Differential Diagnoses

1. Hypothyroidism

70% confidence

The patient's symptoms of fatigue and headache, along with a history of thyroid disorder, suggest hypothyroidism as a possible diagnosis. The patient's age and gender also align with the typical demographic for hypothyroidism.

fatigue

headache

thyroid disorder history

female gender

The user can scroll down to view the entire list of disease predictions.

2. Iron Deficiency Anemia

60% confidence

The patient's symptoms of fatigue and headache could also be indicative of iron deficiency anemia, particularly given the patient's female gender and potential for menstrual blood loss. However, the lack of specific symptoms such as pallor or shortness of breath reduces the confidence in this diagnosis.

fatigue

headache

female gender

3. Generalized Anxiety Disorder (GAD)

50% confidence

The patient's symptoms of fatigue and headache, combined with a high-stress lifestyle (10 hours of laptop work and 5 days of sun exposure), may suggest GAD as a possible diagnosis. However, the lack of specific anxiety symptoms such as worry or irritability reduces the confidence in this diagnosis.

fatigue

headache

high-stress lifestyle

4. Migraine

40% confidence

The patient's symptom of headache could be indicative of migraine, particularly given the patient's female gender and potential for hormonal influences. However, the lack of specific symptoms such as photophobia or phonophobia reduces the confidence in this diagnosis.

The diagnosis engine also enlists recommended tests as shown -

5. Hyperthyroidism

30% confidence

The patient's symptoms of fatigue and headache, combined with a history of thyroid disorder, may suggest hyperthyroidism as a possible diagnosis. However, the lack of specific symptoms such as weight loss or tremors reduces the confidence in this diagnosis.

✓ fatigue

✓ headache

- ✓ thyroid disorder history

Recommended Tests

Thyroid Function Tests (TSH, Free T4, Free T3)

To evaluate the patient's thyroid function and determine if hypothyroidism or hyperthyroidism is present.

HIGH PRIORITY

Complete Blood Count (CBC)

To evaluate the patient's iron levels and determine if iron deficiency anemia is present.

MEDIUM PRIORITY

And it also suggests recommended specialists -

Iron Studies (Serum Iron, TIBC, Ferritin)

To further evaluate the patient's iron levels and determine if iron deficiency anemia is present.

MEDIUM PRIORITY

Recommended Specialists

Endocrinologist

Primary Care Physician

Psychiatrist

General Advice

The patient should continue to engage in regular physical activity and maintain a healthy lifestyle. Additionally, the patient should be advised to follow up with their primary care physician to discuss the results of the recommended tests and determine the best course of treatment.

The diagnosis result ends with some follow-up questions tailored as per the diagnosis -

Follow-up Questions

[Helps refine diagnosis](#)

Answer these questions to help refine the diagnosis:

Have you experienced any changes in your menstrual cycle or heavy menstrual bleeding?

Type your answer...

Have you noticed any changes in your appetite or weight?

Type your answer...

Do you experience any anxiety or worry that interferes with your daily life?

Type your answer...

Have you had any recent blood tests or thyroid function tests?

Type your answer...

Do you have a family history of thyroid disorders or anemia?

Type your answer...

The user can submit answers, opt for new assessment or print the current report. On answering follow-up questions and clicking on "Submit Answers", the **backend runs a fresh RAG retrieval** using the original symptoms + the follow-up answers as additional context, and gives a fresh diagnosis report with a new set of follow-up questions (for further refinement).
